NOTICE OF INTENT TO ISSUE "PERMITS TO CONSTRUCT & OPERATE" PURSUANT TO RULE 212 AND A TITLE V PERMIT PURSUANT TO RULE 3006

This notice is to inform you that the South Coast Air Quality Management District (AQMD) has received applications for Permits to Construct and Operate to modify a bulk loading facility at a location in your neighborhood. The AQMD is the air pollution control agency for all of Orange County and portions of Los Angeles, Riverside and San Bernardino Counties. Anyone wishing to operate, install or modify equipment that could be a source of air pollution within this region must first obtain permits from the AQMD. Rule 212 requires the applicant for certain projects, such as this one, to distribute and publish a public notice prepared by the AQMD prior to the issuance of a permit. This notice is being distributed and published in accordance with Rule 212(g) and Rule 3006 (Title V).

The AQMD has evaluated the permit applications for the following equipment and determined that the equipment will meet all applicable air quality requirements of our Rules and Regulations.

APPLICANT: **SFPP, L.P. (ID NO. 800129), an affiliated entity of
Kinder Morgan Energy Partners, L.P.**

APPLICATION NOS.: **474542, 474543, 474544, 474545, 474546, 474547, 474548,
474549, 474550, 481543, & 495548**

LOCATION: **2359 RIVERSIDE AVE., BLOOMINGTON, CA 92316**

PROJECT DESCRIPTION: **INSTALL THREE NEW STORAGE TANKS, A NEW
BULK LOADING RACK, A NEW LOADING RACK
SUMP, AND MODIFY AN EXISTING STORAGE TANK,
THREE EXISTING BULK LOADING RACKS, AND AN
EXISTING AIR POLLUTION CONTROL SYSTEM
(THERMAL OXIDIZER)**

The facility is a storage and distribution facility of liquid petroleum products including gasoline, ethanol, diesel and jet fuels. Product is received primarily from local refineries via pipeline and is stored in above ground storage tanks. The petroleum product is pumped from the storage tanks and dispensed or loaded into truck tankers by way of bulk loading racks. The truck tankers then deliver the products to local businesses and to gasoline service stations. The petroleum products contain Volatile Organic Compounds (VOC) that are vented to an air pollution control system (thermal oxidizer) when the products are loaded into the trucks.

The facility will use the best available control technology for controlling air pollution. The entire project will result in a net emission decrease of 47 pounds of VOC per day, even though individual emission increases from the new loading rack are estimated to be a maximum of 38.5 pounds per day. This project will emit some toxic compounds typically found in petroleum products. The AQMD has evaluated the short term (acute) and long term (chronic) health impacts associated with the maximum emission increases from the project. Using worst case conditions, AQMD's evaluation shows that the chronic and acute health risks are both below AQMD's toxic thresholds (below a Hazard Index of 1). According to state health experts, a hazard index of one or less means that the surrounding community, including the most sensitive

individuals such as very young children or the elderly, will not experience any adverse health effects due to the toxic nature of these emissions. In addition, the long term cancer risks from each equipment are below the AQMD risk threshold of one in one million.

The air quality analysis of this project is available for public review at the AQMD's headquarters in Diamond Bar and at the Bloomington Branch Library, 10145 Orchard Street, Bloomington, CA 92316. The permit can also be viewed at

<http://www.aqmd.gov/webappl/PublicNotices/Search.aspx> by entering the facility's ID number.

Information regarding the facility owner's compliance history submitted to the AQMD pursuant to California Health & Safety Code Section 42336, or otherwise known to the AQMD based on credible information, is also available from the AQMD for public review. Anyone wishing to comment on the proposed issuance of these permits should submit their comments to the AQMD by April 2, 2009. If you are concerned primarily about zoning decisions and the process by which the facility has been sited at this location, you should contact your local city or county planning department. Please submit comments related to air quality to Mr. Tom Liebel, Senior Air Quality Engineer, Refinery and Waste Management Permitting, Engineering and Compliance, South Coast Air Quality Management District, 21865 Copley Drive, Diamond Bar, CA 91765-4178. For additional information, please call Mr. Tom Liebel at (909) 396-2554.

Proposed Revision to Title V Permit

This is an existing facility applying for a revision to their Title V permit. In addition, two storage tanks (Application No. 458890 and Application No. 458976) were previously issued non-Title V permits prior to the facility receiving its initial Title V permit. Per Rule 3003, these two tanks are being noticed herein for official incorporation into the Title V permit.

As required by Title V of the federal Clean Air Act, the AQMD will revise the existing Title V permit of this facility to reflect the installation, modification and change of permit conditions for the equipment at this facility. The revised Title V permit shall include all of the emission limits and operating conditions in the proposed Permits to Construct and Permits to Operate for the above mentioned equipment. The facility shall be required to certify compliance with the revised Title V permit in addition to recordkeeping and mandatory reporting of any violations of the permit conditions. The Title V permit shall be enforceable by the AQMD, by the federal government, and by citizens.

The public may request the AQMD to conduct a public hearing on the proposed Title V permit by submitting a Hearing Request Form (Form 500-G) to Mr. Tom Liebel of the AQMD. The AQMD will hold a public hearing if there is evidence that the proposed Title V permit is incorrect or inadequate to ensure compliance with regulatory requirements, and that a public hearing will likely provide additional information that will affect the drafting and/or issuance of the permit. Public hearing request forms and the schedule of public hearings may be obtained from the AQMD by calling the Title V hotline at (909) 396-3013 or downloading from the Internet at <http://www.aqmd.gov/titlev>. The public must submit hearing requests to the AQMD by March 18, 2009, and must send a copy of the hearing request by first class mail to Mr. Ron Zinner, Environmental Compliance Manager, Kinder Morgan Energy Partners, 1100 Town & Country Road, Orange, CA 92868.
